CSI CUNY 2X TECH

The CSI Computer Science Department recently launched the CUNY 2X Tech initiative to prepare the next generation of world-class technology professionals. This innovative collaboration between industry and academia will connect CSI students to careers in the tech industry by aligning their education with industry needs.

CUNY 2X Tech features support for industry-aligned instruction, knowledgeable advisors, and relevant work experience. It is delivered together with the Tech Talent Pipeline's Residency Program which offers a technical bootcamp focusing on professional development and career readiness, followed by a paid internship with a NYC tech company.

Some benefits students receive as a part of this program include:

- Receiving priority advisement.
- Creating a Career Action Plan.
- Getting first look at internships, job shadowing, and employment opportunities.
- Working closely with a career coach, academic advisors, industry professionals, faculty and administrators to ensure students are career ready after graduation.
- Visiting employers on site: They will explore the exciting places their degree can take them through interactive discussions and career treks into the tri-state area.
- Learning about current and emerging career trends in special career and academic seminars.

New York City is home to thousands of tech companies, attracting significant venture capital and paying very attractive salaries. We look forward to working with students to secure their place in this exciting landscape.
